1.(original) A pultruded part comprising:

a wall having a first surface and a second surface spaced by a thickness of the part, the wall extending longitudinally in a pultrusion direction and having a transverse width transverse to the longitudinal pultrusion direction;

fiber layers within the wall;

a thermo-set, cross-linked poly-urethane permeated through the fiber layers;

the fiber layers including at least one first layer of fibers having fibers extending only in the longitudinal pultrusion direction;

the fiber layers including one or more second layers;

the or each second layer consisting solely of a layer of fibers such that the poly-urethane is permeated through the layer of fibers between the fibers;

the or each second layer having fibers with at least portions thereof extending transverse to the longitudinal direction;

the or each second layer of fibers having a total quantity of fibers in the or each second layer which is of the order of or less than 0.5 ounces per square foot.

- 2.(original) The pultruded part according to Claim 1 wherein at least one part of the wall is reinforced through its thickness solely by fibers extending only in the longitudinal pultrusion direction.
- 3.(original) The pultruded part according to Claim 1 wherein the or each second layer of fibers comprises an entangled layer of staple fibers.

- The pultruded part according to Claim 1 wherein the or each 4.(original) second layer of fibers is a scrim or mesh having openings for penetration of the polyurethane between the fibers.
- The pultruded part according to Claim 1 wherein the wall 5.(original) includes a leg portion thereof connected to a main body portion of the wall only at one end of the leg so as to define a second free end of the leg and wherein reinforcing fibers in the leg consist solely of fibers extending only in the longitudinal pultrusion direction.
- The pultruded part according to Claim 5 wherein the leg 6.(original) portion has a wall that is thicker than that of the main body portion.
- The pultruded part according to Claim 1 wherein the or each 7.(original) second layer includes fibers which are formed of metal strands which provide both transverse strength and the characteristic of electrical conductivity and/or ferromagnetism.
- The pultruded part according to Claim 1 wherein the or each 8.(original) second layer of fibers has a total quantity of fibers in the layer which is of the order of or less than 0.25 ounces per square foot.
- The pultruded part according to Claim 1 wherein the or each second layer of fibers each has a total quantity of fibers therein which is of the order of 0.1 ounces per square foot.
- 10.(original) The pultruded part according to Claim 1 wherein the wall defines a peripheral wall fully surrounding a hollow interior such that the first surface faces outwardly and the second surface faces inwardly and wherein the reinforcing fibers consist only of:

a first layer formed wholly of longitudinal fibers where the fibers of the first layer extend only in the longitudinal pultrusion direction; and

a second layer formed wholly of fibers such that the poly-urethane is permeated through the layer of fibers between the fibers of the second layer;

wherein the second layer has fibers with at least portions thereof extending transverse to the longitudinal direction;

wherein the first and second layers are in contact at a location between the first and second surfaces;

wherein the first layer is located at the first surface such that some of the longitudinal fibers thereof are located at the first surface;

and wherein the second layer is located at the second surface such that some transverse fiber portions are located at the first surface and such that the first layer is spaced from the second surface over the whole of the second surface by the second layer.

11.(currently amended) A pultruded part comprising:

a wall having a first surface and a second surface spaced by a thickness of the part, the wall extending longitudinally in a longitudinal pultrusion direction and having a transverse direction transverse to the longitudinal pultrusion direction;

the wall defining a peripheral wall fully surrounding a hollow interior such that the first surface faces outwardly and the second surface faces inwardly;

reinforcing fibers within the wall;

a non-linear cross-linked resin material permeated through the fibers and filling the thickness between the surfaces so as to define the surfaces;

a first layer formed wholly of longitudinal fibers where the fibers of the first layer extend only in the longitudinal pultrusion direction; and

a second layer formed wholly of fibers such that the resin is permeated through the layer of fibers between the fibers;

the second layer being defined by a pre-formed two dimensional mat having fibers of the mat with at least portions thereof extending transverse to the longitudinal direction;

the first and second layers being in contact at a location between the first and second surfaces;

the first layer being located at the first surface such that some of the longitudinal fibers thereof are located at the first surface;

and the second layer being located at the second surface such that some transverse fiber portions are located at the first surface and such that the first layer is spaced from the second surface over the whole of the second surface by the second layer.

- 12.(cancelled)
- 13.(previously presented) The pultruded part according to Claim 11 wherein the resin is a thermoset cross-linked polyurethane.
- 14.(previously presented) The pultruded part according to Claim 11 wherein the resin is a multi-functional resin.
- 15.(previously presented) The pultruded part according to Claim 11 wherein the second layer of fibers comprises an entangled layer of staple fibers.

16.(previously presented) The pultruded part according to Claim 11 wherein the second layer is a scrim or mesh having openings for penetration of the resin between the fibers.

17.(previously presented) The pultruded part according to Claim 11 wherein the wall includes a leg portion thereof connected to a main body portion of the wall only at one end of the leg so as to define a second free end of the leg and wherein reinforcing fibers in at least part of the leg consist solely of fibers extending only in the longitudinal pultrusion direction.

18.(previously presented) The pultruded part according to Claim 17 wherein the leg portion has a wall that is thicker than that of the main body portion.

20.(previously presented) The pultruded part according to Claim 11 wherein at least one part of the wall is reinforced through its thickness solely by fibers extending only in the longitudinal pultrusion direction.

21.(previously presented) The pultruded part according to Claim 11 wherein the second layer of fibers has a total quantity of fibers in the layer which is of the order of or less than 0.5 ounces per square foot.

22.(previously presented) The pultruded part according to Claim 11 wherein the second layer of fibers has a total quantity of fibers in the layer which is of the order of or less than 0.25 ounces per square foot.

23.(previously presented) The pultruded part according to Claim 11 wherein the second layer of fibers each has a total quantity of fibers therein which is of the order of 0.1 ounces per square foot.
